REAL-TIME SAFETY AND SECURITY MONITORING IS AVAILABLE TODAY

Temperature changes can ruin your pharmaceutical products. Today, most in-transit temperature monitoring is passive. Getting temperature readings after the fact doesn't give you the ability to correct a problem. All you know is that you have a problem.

Continuous, active monitoring and reporting is now available to close that gap in the cold chain. The result is improved product safety and security.

CLOSING THE GAP IN THE COLD CHAIN

You no longer need to lose control when your pharmaceutical products are in transit. Whether you're shipping via ground, rail, or sea, you can now see temperature, security and other readings continuously.

You can extend your control and improve product safety and security while maintaining your reputation for quality and timely delivery.

OVERSIGHTSM IN-TRANSIT STATUS MONITORING AND REPORTING

OverSight provides real-time tracking and reporting using the latest sensor and communications technology. Oversight monitors important conditions like:

- ▶ **TEMPERATURE**
- ▶ **LIGHT**
- ▶ **HUMIDITY**
- ▶ **SHOCK**
- ▶ **LOCATION**
- ▶ **DOOR OPEN**

With OverSight, you gain both added product security and instant response capabilities... Like you're riding along with every shipment.

INTELLIGENT ALERTS

Instead of being flooded with status data, OverSight inspects every reading. Intelligent Alerts are only triggered when a reading falls outside the settings that you established. If something needs your attention, you get the information you need, when you need it. You gain the power to protect the quality of every shipment.

OVERSIGHT

- ▶ **REAL-TIME STATUS**
- ▶ **ACTIVE MONITORING & REPORTING**
- ▶ **GLOBAL, 24/7, 100% COVERAGE**
- ▶ **REAL-TIME INTELLIGENT ALERTS**

Contact Locus Traxx today and learn how OverSight will help you improve product quality and security by closing the gap in the cold chain.
